# ScreenBeam®

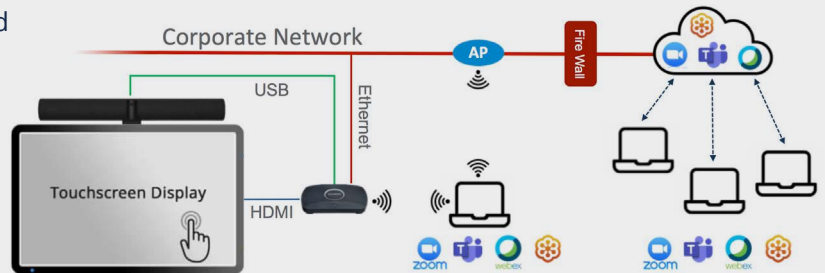

## Inclusive, collaborative, reinvented meeting experience.

ScreenBeam and Jabra have come together to deliver a turnkey wireless collaboration solution that provides user choice and flexibility.

Combining ScreenBeam 1100 Plus, a contactless Bring Your Own Meeting (BYOM) room solution, with Jabra's Panacast 50 video conferencing device, provides wireless connectivity, eliminating the cost and inconvenience of long USB cables and USB extenders. In-person and remote employees in a blended meeting enjoy an inclusive experience, using personal devices while removing touchpoints with dongles, cables and room control systems.

ScreenBeam 1100 Plus, with ScreenBeam Conference software, enables users to host

a room-based meeting from their device and connect remote participants using the web conferencing tool of choice. Users can wirelessly share content to the room display, and wirelessly connect to the Jabra Panacast 50 with its innovative panoramic 180 field of view and powerful AI features.

### Jabra Panacast 50
