

# ScreenBeam™ 1200 with Intel® Unite™

The ScreenBeam 1200 with Intel Unite is a smart collaboration and meeting platform for small businesses or large enterprises that need modern, connected and secure meetings for improved productivity and collaboration. It comes complete with Intel Unite software to host meeting sessions, share content, and provide access control of conferencing and facility technologies for both on premises and remote attendees.

ScreenBeam 1200 with Intel Unite is available in two options, depending on your organization's scale and needs:

## Small Business Mode

Small Business mode is recommended for organizations with 5 or less conference rooms and only require the basic features listed in the feature comparison chart, and requires the following components:

- **ScreenBeam 1200:** A mini PC runs Intel Unite software and connects to the conference room display.
- **Client Software:** Intel Unite software on client device. The application allows client device to connect to the ScreenBeam 1200.

# Enterprise Mode

Enterprise mode supports up to 10,000 conference rooms with expanded feature support and a remote management portal. This version will require a Microsoft Windows Server 2008 or greater, and requires the following components:

- **ScreenBeam 1200:** A mini PC runs Intel Unite software and connects to the conference room display.
- **Client Software:** Intel Unite software on client device. The application allows client device to connect to the ScreenBeam 1200.
- **Enterprise Server:** You can install the enterprise server on a physical machine or run it as a virtual machine. The web server provides the PINs, resolves PIN issues, allows IT to download client software for client device, and serves as the portal to manage the deployment.

## Feature Comparison

Key Features	Enterprise Mode	Small Business Mode
Supports more OS (see System Requirements)	✓
